SIG 06 - INNO - Innovation

With our theme Exploring the Future of Management: Facts, Fashion and Fado, we invite you to participate in the debate about how to explore the future of management. We look forward to receiving your submissions.

ST06_07 - Open Innovation

Proponents:
Liliana Mitkova, UEVE; Luciana CASTRO GONCALVES, ESIEE PAris ; Nuran ACUR , Adam Smith Business School; Steve DIASIO, University of South Florida- St. Petersburg

Short description:
The track aims to stimulate a discussion on the latest research insights in open and collaborative innovation in the ecosystem, especially with respect to new perspectives, methods, tools, competencies and context-specific solutions. This track involves different concepts: open innovation, innovation and ecosystem, collaborative innovation, Intellectual Property rights and innovation.

Long description:
During the previous years, the interest in open innovation from academia and practice has been growing continuously. Within the open innovation framework, companies transfer knowledge they cannot leverage internally to the outside and use the knowledge produced by externals to advance their technologies and generate innovations internally. The fundamental principle of open innovation is simple in theory. For many organizations, however, the journey toward open innovation is difficult. Activities such as internal and external knowledge exploitation and exploration call for different capabilities and solutions that organizations should build in order to be successful in their open innovation endeavors. Open innovation should not be an end in itself; it is only a means to increase innovativeness and performance. To gain more insights into the benefits and challenges of open innovation, empirical studies and conceptual considerations are needed, not only in the compelling evidence of companies that have been practicing open innovation successfully. Papers including different theoretical perspectives, different (combinations of) methods, and investigations of different situations and settings should provide further developments in the field as well as identify “blind spots”. The topics of interest include:

- Multiple perspectives and degrees of open innovation: We look for studies and conceptual works which focus on the micro-foundations, such as skills, knowledge, trust, motivation, and other individual prerequisites for cooperation and competition. Equally, studies focusing
on phenomena at the meso and macro-level, e.g. on open strategies and open business models, dynamic capabilities, culture, governance, alternative IP regimes, structural and procedural factors, including the investigation of distinct open innovation practices are welcome.

- Studying open innovation with different methodological approaches: Besides case studies and quantitative datasets, we look for multi-method approaches, design-oriented works, and in particular methods that make use of new technologies for gathering and analyzing data, such as big data based papers or studies using mobile or virtual ethnographic methods.

- Open innovation in different settings: This track reflects recent calls for more studies on open innovation in SMEs, on the project level, in the service sector, in multinational setups, and in higher education institutions. It also includes studies which highlight peculiarities of open innovation in real and virtual social spaces. In particular, studies which investigate the links between human behavior and collaboration technologies, e.g. in the form of socio-technical systems are welcome. We hope to attract studies from a wide range of geographic spaces (countries, territories, clusters, ecosystem, etc.).

**Keywords:**
Open innovation
Innovation and ecosystem
Collaborative innovation
FAB LAB and innovation
Open spaces and open strategies
collaborative business models
